

COXREELS

Dolly Series "DM" Design Features

The following are feature and benefits of our Portable Dolly Series Heavy Duty, Large Capacity Hand Crank Hose Reels.

Coxreels Dolly Series hand crank reels are industry designed for industrial applications where longer lengths of hose are required. These "reels on wheels" offer a safe and efficient means of handling and using the hose anywhere you need to go. The direct crank action combined with twin bearings requires minimum rewind effort.

1. HAND CRANK: Coxreels incorporates a removable handle to solve storage space problems. The 1/2 inch round solid steel hand crank is fitted directly to the reel and prevents any possibility of losing the handle. A smooth, plastic hand grip rides on the crank for smooth and easy operator use.

2. TENSION BRAKE: A tension brake is supplied on all models. This adjustable tension brake allows the user to apply pressure to the reel to create a drag so a hose backlash does not occur or to completely lock the reel from rotating when not in use.

3. PLUMBING: Our unique "in line" plumbing construction is machined from solid steel to the specified bore size required. This eliminates any possible weld fractures and / or fitting leaks.

4. AXLE: The axle is machined from a solid 1.25 inch diameter round cold-rolled steel for strength. The swivel is mounted on the end of the axle, making it easy for service and repair, thus reducing the cost of repair should it be necessary.

5. SWIVEL: Our full flow balanced swivels are designed to rotate under minimum torque, insuring smooth hose retraction and maximum flow. The swivel is a self-contained assembly and can be replaced as a unit, unlike some of our competitors. Some competitive reels use the main shaft of the reel as the spool of the swivel. When their swivel becomes worn out and do not seal, it may be necessary to replace the main shaft of the reel and the swivel. This is substantially more expensive in material, and requires a total disassembly of the reel.

Our low and medium pressure swivels are machined from solid brass to minimize corrosion. Our high pressure swivels are machined from alloy steel for higher strength and zinc plated for rust protection. Buna "N" seals are standard. Viton and EPDM seals are available as an option. Stainless steel swivels are also available as an option with various optional seals.

6. BEARING: Coxreels state of the art bearings will keep on turning in the toughest of working environments. No more worries of corrosion as associated with plated steel bearings. These bearings require no lubrication maintenance, which is simple and trouble free.

7. DISCS: Our discs are spun out of heavy gauge steel. All Coxreels discs include the extra process of rolling the edges. Rolled edges allow ultimate safety and eliminate the chances of the operator or the installer being injured by the sharp edges of the disc ends, as found on some products. The two steel discs are welded to the center drum. This design provides a stout assembly to assure efficient service in the most demanding applications.

8. WHEELS: Solid rubber eight inch diameter tires ride on a solid steel axle. Semi-pneumatic tires are available as an option.

9. REEL HANDLE: Portable reels are supplied with a handle which is positioned approximately 40 3/4" off the ground, so the operator can easily grab it to roll the reel around. The 1-1/4" round tube design is comfortable to grip and the handle detaches to allow for a compact shipping or storing size.

10. DOLLY BASE: The base structure is a solid welded unit, containing no nuts or bolts that could possibly loosen over time and require maintenance. In addition, we provide two front rubber feet to prevent the reel from slipping forward when the operator is pulling out the hose.

11. HOSE RETENTION: A steel hose "U" clamp is supplied to hold the hose assembly to the reel drum. This design serves two important areas: (1) aligns the hose to smoothly (with no humps or bumps) begin its rotation on to the reel drum, and (2) eliminates the hose from slipping when pulled all the way out, which would cause damage to the hose end fitting resulting in leakage.

12. FASTENERS: Coxreels uses vibration-proof, reusable, self-locking and non-threaded fasteners. This type of fastener assures the reel will not loosen up and come apart.

13. PAINT: Coxreels paints each component part individually with a very durable polyester powder coat finish. This finish provides for excellent Ultra Violet (UV) protection and a high quality, chip and scratch resistant finish that fights weathering. Coxreels uses state-of-the-art painting equipment.

Each individual part is treated before painting through a five-stage process. This process consists of cleaning, degreasing, iron phosphate pre-treating and a final water rinse to remove any existing impurities allowing for maximum paint adhesion.

Powder coating is the finest metal finish technology available today. An environmentally friendly process, the powder coating operation in our plant creates no air pollution

14. PACKAGING: Our packaging consists of a double wall corrugated box. Also included is a formed insert to position the reel and eliminate any shipping damage. This packaging has been tested in shipments to various parts of the world.

15. RELIABILITY: Besides improving reliability of components as described above, we have eliminated welding to our major structural parts, to improve the looks and increase the product reliability.

16. QUALITY: Coxreels continuously strives for total quality. We are constantly improving processes and designs to enhance the quality of our reels. We seek suppliers that follow similar stringent quality guidelines as we do.

The Coxreels team is committed to total quality. Our products are accepted worldwide and we are committed in serving global market needs.

17. CUSTOMER SATISFACTION: Our commitment to our customer satisfaction is of paramount importance to us.

- We intend to provide the customer full service and support necessary to insure maximum acceptance of our product.
- We work closely with our customers, distributors and marketing groups to insure that we are correctly filling the customers requirements and needs.
- We have developed a system to ship our standard products on time every time to our customers, and non standard reels on a reasonable schedule.

18. GLOBAL MARKETS: Coxreels markets extend beyond the United States. Canada, Mexico, South and Central America, United Kingdom, Asia and Australian markets continually specify Coxreels for their demanding requirements.
