

LOCKOUT HASPS

CATEGORY fact sheet

Lockout hasps are vital to a successful safety lockout program or procedure as they provide efficient multi-person lockout. For lockout situations where up to 6 employees are involved, a hasp is an effective device where all personnel can be involved in maintenance activities at the same time. Once activities are finished and the last employee's padlock is removed the energy source can be active. Hasps ensure each worker's safety is not compromised.

Each hasp holds up to 6 padlocks, feature a vinyl handle for easy grip and are available in different sizes to effectively isolate any energy source required.

Aluminum, Spark Resistant

Part #2CJH7 Part #2CJH8

Recycled Steel

Part #1U177 Part #5T591

Recycled Steel with Interlocking Tabs

Part #2CJJ4

Pry-resistant, interlocking tabs provide an extra layer of safety
