

When a Spill Occurs.....

1. **Assess the Risk:** Determine the nature and substance of the spill.
2. **Select Personal Protection (PPE):** Select the proper clothing and gear to safely respond to the spill. If you cannot identify the spilled substance, always treat it as highly toxic.
3. **Contain the Spill:** Use socks, dikes, and/or booms to contain the spill and keep it from spreading or contaminating water sources.
4. **Stop Product Flow:** Act quickly to stop the source of spilled material, if possible.
5. **Absorb Contained Fluids:** Place absorbent pads, pillows, socks, and booms directly on the spilled material.
6. **Dispose and Decontaminate:** Dispose of contaminated material in compliance with local, state and federal regulations. Decontaminate the site, personnel, and all equipment.
7. **Complete Final Reports:** Complete all notification documents, medical exposure reports, and paperwork associated with the spill incident.
8. **Restock Materials:** Replace absorbent materials, salvage drums, and safety equipment that were used in the clean-up process.

Spill Kit Compatibility:

- Oil-Only Spill Kit: (for Oil Only, does not absorb water)
Universal Spill Kit: (for Oils, Water, Coolants, Solvents, & More)
Aggressive Spill Kit: (for Acids, Bases & Unknown Liquids)
